

Water Management in India

By M. Dinesh Kumar

2009. Hardcover. Condition: New. 352 The book deals with some of the most debated, yet unresolved questions regarding water management options for India and several other developing economies. It argues that there are serious knowledge gaps about "what solutions work and under what conditions". It challenges the "received wisdom" about the potential of some of the water management solutions in popular parlance. It also questions the "skeptical pessimism" about the feasibility of some of the more classical approaches. The water management options being investigated are: roof water harvesting for domestic water security; local water harvesting and groundwater recharge; virtual water trade; micro irrigation for water demand management in agriculture; pricing of electricity for regulating groundwater pumping; and creating large water storages for ensuring sustainable water use. In the process, the book attempts to explode certain myths about what can solve India's water scarcity problems. This book will be useful for policy makers, academics, practitioners, researchers and students in the area of water management. About The Author:- M. Dinesh Kumar is a Ph.D. in Water Management, and has more than 18 years of professional experience in research, action research and consulting in the field of water resources. He is currently heading...
